## EXPERIENCE

---

### Rainbow

*Software Engineer*

Remote

February 2022 — March 2023

- Designed and built in-app notifications for on-chain activity:
  - Alchemy Notify API for on-chain activity ingestion
  - Webhook Ingestion and Notification Publishing services written in Go
  - Kafka on AWS MSK for on-chain activity processing and batching
  - Firebase for iOS and Android notifications
  - <https://twitter.com/rainbowdotme/status/1579867429936988163>
- Designed and built Optimism Rewards project:
  - Dune with SparkSQL for data ingestion
  - Data Ingestion and API services written in Go
  - GraphQL for API
  - <https://twitter.com/rainbowdotme/status/1625148574446112769>
- Kubernetes on AWS EKS
- PostgreSQL on AWS RDS
- Terraform for all things infra
- Datadog and Prometheus for logs and metrics

### Reface

*Software Engineer*

Remote

June 2021 — February 2022

- Responsible for building and maintaining authentication and social profile microservices migrated from old Python REST API
- Implemented several product features:
  - Realtime Camera: user data on Google Cloud Storage, further routing to ML services
  - Memes Feed: integration with Python admin panel, caching, tight deadlines for development
- Implemented CDN support for all media files that's served from backend reducing costs on Google Cloud Storage network 5x
- APIs built with gRPC and Protobuf schema
- Data stored in CockroachDB and cached in Redis
- Deployed with Google Kubernetes Engine
- Monitoring with Prometheus, Grafana
- Logging with Kibana

**Aviasales**  
*Software Engineer*

Saint Petersburg, Russia  
May 2019 — May 2021

- Backend for iOS/Android app:
  - Microservice architecture built with Ruby on Rails and PostgreSQL
  - Deployed with Capistrano and served with Nginx
  - Metrics collected with Datadog
- MVP and most of the early backend for the new product:
  - Early development made from scratch and by myself
  - One GitHub monorepo
  - Golang microservices architecture along with the gateway
  - Data stored in PostgreSQL and consumed from HDFS and Kafka
  - Slow endpoints serving external APIs cached with Redis
  - Deployed to Kubernetes with Jenkins
  - Metrics collected with Prometheus and drawn on Grafana dashboards
  - Logs collected and analyzed with Kibana
- Contributions to other teams' projects:
  - Elixir monolith
  - APIs built with Phoenix for REST and Absinthe for GraphQL
  - Data stored in PostgreSQL with changes produced to Kafka
  - Admin panel built with React and Antd UI Kit

**IQ Option**  
*Data Scientist*

Saint Petersburg, Russia  
July 2018 — May 2019

- Interactive Tableau product-related reports and dashboards
- Data-driven decision making (A/B tests, experiments)
- Investigating users' behavioural events to find insights
- Help other teams with their analytics-related requests
- Tableau, Hadoop, Hive, Python, Jupyter, SQL

PROJECTS AND OPEN SOURCE

---

- Bionic, personal project
  - Golang CLI to convert data exports from various services to a single SQLite database
  - Supported services are: Apple Health, Google Account, Google Chrome, Instagram, Netflix, OFX (banking data), RescueTime, Spotify, Telegram, Twitter and more
  - 100+ stars on GitHub
- Foundry, open source contributor
  - Blazing fast, portable and modular toolkit for Ethereum application development written in Rust
  - Participated in building Solidity language formatter which also required some contributions to Solang (<https://github.com/hyperledger/solang/commits?author=shekhirin>)
  - <https://github.com/foundry-rs/foundry/commits?author=shekhirin>
- Meilisearch, open source contributor
  - Lightning-fast search engine that fits effortlessly into your apps, websites, and workflow
  - Participated in implementing the new search engine
  - <https://github.com/meilisearch/meilisearch/commits?author=shekhirin>
  - <https://github.com/meilisearch/milli/commits?author=shekhirin>
